

CORPORATE IT SERVICE DESK - JIRA SERVICE MANAGEMENT

Simulated Enterprise IT Support Portfolio Project

PLATFORM

Jira Service Management Cloud

PROJECT FOCUS

IT Service Management • Incident Management • Service Requests • Workflow • Automation • SLA Management • Reporting

PROJECT OVERVIEW

Designed and configured a simulated corporate IT service desk in Jira Service Management to demonstrate an end-to-end IT support environment. The project models how an internal IT team can manage employee incidents and service requests from intake through resolution while maintaining visibility into priorities, workload, SLAs, and operational performance.

WHAT I BUILT

- Structured IT incident and service request workflows
- Priority-based queues for triage and operational management
- SLA targets, monitoring, and performance reporting
- Automated escalation for high-priority requests
- Employee onboarding workflow with parent/subtask structure
- Operational dashboard and service desk reporting
- Internal troubleshooting documentation and customer communication
- Knowledge Base investigation and integration testing

KEY PROJECT HIGHLIGHTS

AUTOMATION

Built and successfully tested a High Priority Escalation rule that adds an internal escalation note when a High-priority request enters In Progress.

SLA MANAGEMENT

Configured priority-based targets:

- Time to First Response - 2 hours for Highest priority / 8 hours for other work
- Time to Resolution - 4 hours for Highest priority / 16 hours for other work

ONBOARDING

Created DEMO-20, a new employee onboarding request with four completed subtasks covering user account creation, laptop configuration, email/application access, and shared-drive permissions.

REPORTING

Created a Corporate IT Service Desk Dashboard showing high-priority requests, workload distribution, priority breakdown, and request age.

INCIDENT MANAGEMENT

Configured and documented realistic IT support scenarios including Wi-Fi, email, VPN, laptop, Teams, network drive, and printer issues.

RESULT

Demonstrates practical Jira Service Management skills across IT support operations, workflow design, automation, SLA management, service requests, queue design, and operational reporting.
